What type of pull requests has @brandonroberts worked on?

**StarSearch**

Here are some notable pull requests by  @brandonroberts:

1. **Repository:**  [analogjs/analog](#)
 - **Title:** build: only build packages during release job
 - **State:** Merged
 - **Description:** Focuses on configuring the build process to only package during the release job.
 - **Changes:** Involved 10 additions and 9 deletions over 10 files.
 - **Comments:** 4
2. **Repository:**  [analogjs/analog](#)
 - **Title:** docs(astro-angular): add docs on filtering file transforms with Astro
 - **State:** Merged

What is GitHub Copilot?

What is GitHub Copilot?

GitHub Copilot is a coding assistant, your pair programming buddy

- Can perform inline code completions
- Has chat capabilities to ask questions, get answers and refactor files
- Can be extended via [GitHub Copilot Extensions](#)
- Has a new [agent mode](#) as of early February 2025

What is GitHub Copilot?

GitHub Copilot can now be used in any editor if they leverage the recently released [Copilot Language Server SDK](#)

What is GitHub Copilot?

Where can you use Copilot?

- Microsoft development environments and properties
 - GitHub.com
 - Visual Studio
 - Visual Studio Code
 - GitHub Codespaces

What is GitHub Copilot?

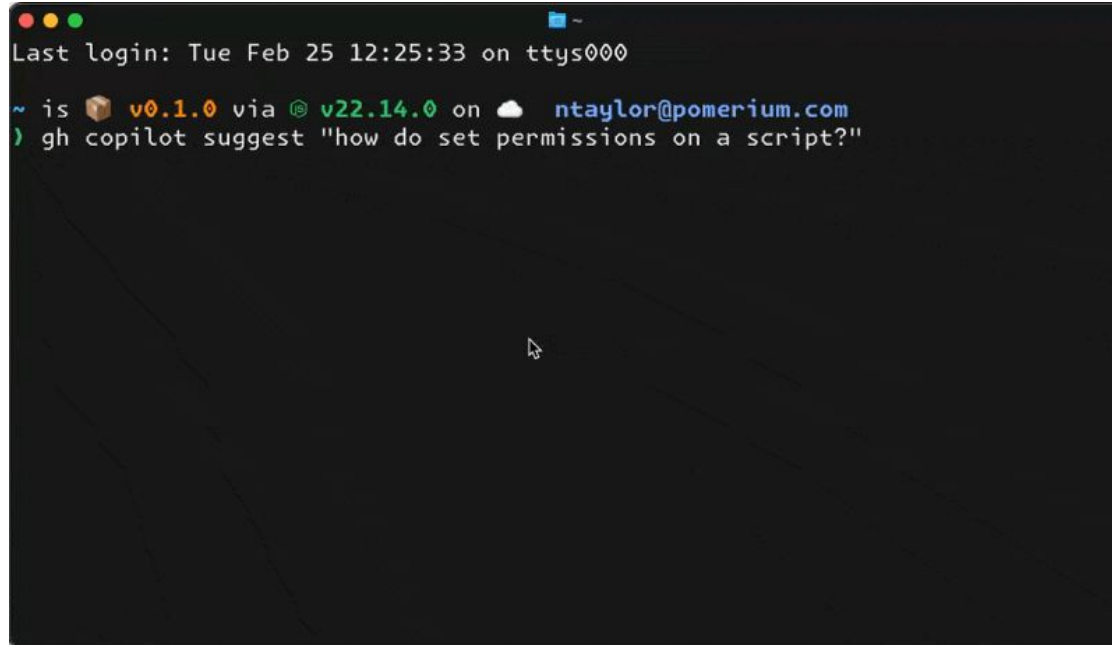

Where can you use Copilot?

- JetBrains IDEs
- XCode
- Vim/Neovim
- Any editor that leverages the Copilot Language Server SDK

What is GitHub Copilot?

You can even use GitHub Copilot on the command line now

A screenshot of a terminal window with a dark background. At the top, it shows 'Last login: Tue Feb 25 12:25:33 on ttys000'. Below that, the prompt '~ is 📦 v0.1.0 via @ v22.14.0 on ☁️ ntaylor@pomerium.com' is displayed. The user has entered the command 'gh copilot suggest "how do set permissions on a script?"'. A mouse cursor is visible in the center of the terminal.

```
Last login: Tue Feb 25 12:25:33 on ttys000

~ is 📦 v0.1.0 via @ v22.14.0 on ☁️ ntaylor@pomerium.com
> gh copilot suggest "how do set permissions on a script?"
```

What is a GitHub Copilot Extension?

What is a GitHub Copilot Extension?

The name says it all. It literally extends GitHub Copilot

- Create custom AI-powered tools
- Integrate with third-party services
- Can access files and editor context

What is a GitHub Copilot Extension?

Two types of Copilot Extensions:

 Skillset: makes it easier to connect third-party services and custom APIs into the Copilot workflow

 Agent: provides complete control over request handling and response generation, enabling custom workflows through integration with LLMs and APIs while managing conversation context and user interactions.

What is a GitHub Copilot Extension?

An extension works anywhere GitHub Copilot is available except for the command line.

What is a GitHub Copilot Extension?

If calling a Copilot extension that is an agent, your prompt must start with **@copilot-your-extension-name**

/help What can you do?

@ollamacopilot memoize this function

The anatomy of a Copilot Extension

The anatomy of a Copilot Extension

Two things are required to create a Copilot extension:

- A publicly accessible web application
- A registered GitHub application

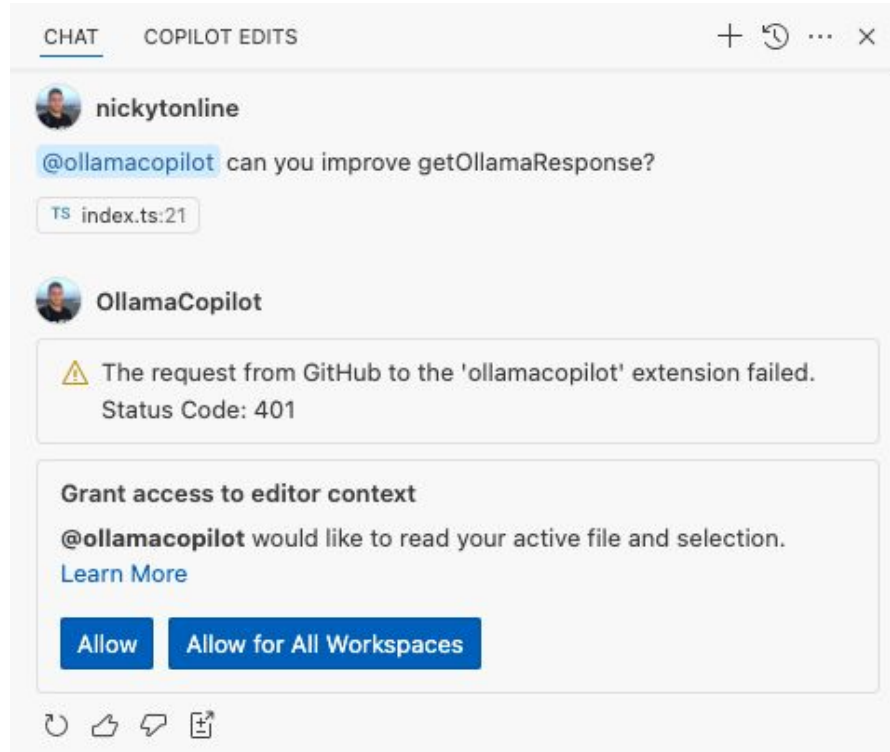

The anatomy of a Copilot Extension

Permissions to set for the GitHub App

- Access to a user's Copilot chat (read-only and required)
- Access to context (read-only and optional)

The anatomy of a Copilot Extension

Let's Build!

copilot-extensions/preview-sdk.js

Getting Your Development Environment Set Up

Getting Your Development Environment Set Up

- Install the dependencies for the project
- Expose local development server to the Internet
- Create and configure a GitHub Application

Getting Your Development Environment Set Up

- Leverage the [copilot-extensioins/preview-sdk.js](https://copilot-extensioins.github.io/preview-sdk.js)
- Debug extension

Wrapping Up

Wrapping Up

- Still early days for Copilot Extensions
- Expect a Cambrian explosion of Copilot extensions
- 2025 is the year of AI agents
- Go give [nickytonline/copilot-extension-template](https://nickytonline.com/copilot-extension-template) a star
- Go build a GitHub Copilot extension!
